

Biometrics for Children

The CSIR has developed a prototype of a biometric recognition system to identify and verify children from infancy to adulthood.

THIS SOLUTION ADDRESSES PROBLEMS SUCH AS:

- Identity theft and fraud against children
- Child trafficking
- Tracking the origins of lost and found children
- Identity management systems for children

WHY?

- There is currently no technology in the market that can acquire biometric information from infants and successfully match it to the same individuals during growth and adulthood, which leaves children vulnerable to exploitation in various ways.
